

Permitting and Compliance

ITP Energised is a trusted advisor providing client-focused, reliable, commercially minded, environmental and energy consulting services.

We have strong corporate credentials, a first-class in-house team, and support from the best technical sub-consultants we know. This allows us to adapt our offering as required based on the geography and specifics of every project.

Our team has an extensive track record working with operators to achieve and maintain compliance with applicable regulations across many sectors including food & beverage, automotive, chem-pharma, oil and gas and other industrial manufacturing.

We can assist you with all aspects of regulatory compliance and environmental management, with particular specialisms in energy auditing and efficiency, on-site renewables generation, emissions monitoring, odour management and control and environmental planning and impact assessment.

“ITPE added value to the project; particularly in terms of understanding Regulator requirements. I have already recommended them to other parts of the business.”

Jamie Harrison, Environmental Manager, Fold Hill Foods
